Giv2 Project
At Giv2, I mainly worked with the development team to build the software.
Project: Giv2: is a cloud-based fundraising platform which helps donors can easily donate to any kind of campaigns which generated from a qr code by a few clicks and also helps clients can manage their own campaigns.
Technologies: *Vue.JS, Vuetify, Firebase, HTML/CSS, Visual Studio Code*
Responsibilities:
- Building interface and functional features based on requirements
- Analysing, debugging, and fixing program defects
- Collaboration with other team members on a daily basis via Slack and weekly face to face meetings as part of the agile project methodology

MVP Studio, Auckland, 08/2019- 03/2020
Software Developer Intern

MVP Studio is an incubator for software start-ups which successfully helped to turn the idea to multimillion-dollar business. At MVP Studio, I am mainly working with the development team to build software products using the latest and scalable technologies.

Project: Project Talent: Talent is a cloud-based recruitment platform which helps employees and recruiters to directly connect talents, manage the entire recruiting process and the onboarding process for the new employee.

Technologies: *C#.NET, ASP.NET MVC, React.JS, Semantic UI, Entity Framework, HTML/JS/jQuery, Visual Studio.*

Responsibilities:
- Building interface and functional features based on requirements
- Analysing, debugging, and fixing program defects
- Implemented multiple front-end validation checks using the React.JS JavaScript framework
- Publishing and deploying applications on Azure for development and testing
- Collaboration with other team members on a daily basis via Slack and daily SCRUM meetings as part of the agile project methodology
- Assuring all work is completed following the company coding standards.

PORTFOLIO / PROJECTS

Southern Institute of Technology, 02/2019 -06/2019
Rental Car Website
Project: TibcoRentals: An online trading platform for rental car in Invercargill. Users can make a booking and manage details of the customer and guest users can search for the type of car to rent.
Technologies: *C#.NET, ASP.NET MVC, Entity Framework, HTML5/CSS, Visual Studio*
Responsibilities:
- Developed fully functional responsive web applications based on Business Requirements
- Create views using HTML5, CSS3
- Used .Net Framework with C# as the backend in delivering the functionality detailed in technical specification.
- Tested front-end code in multiple browsers to ensure cross-browser compatibility.
- Design and develop business logic components interacting with MSSQL
- Contributed to the enhancement of the application by adding new features defects through participation in agile sprints.
- Collaboration with other team members on a daily basis via messenger, email and face to face as part of the agile methodology.
